

# TOKENOMICS

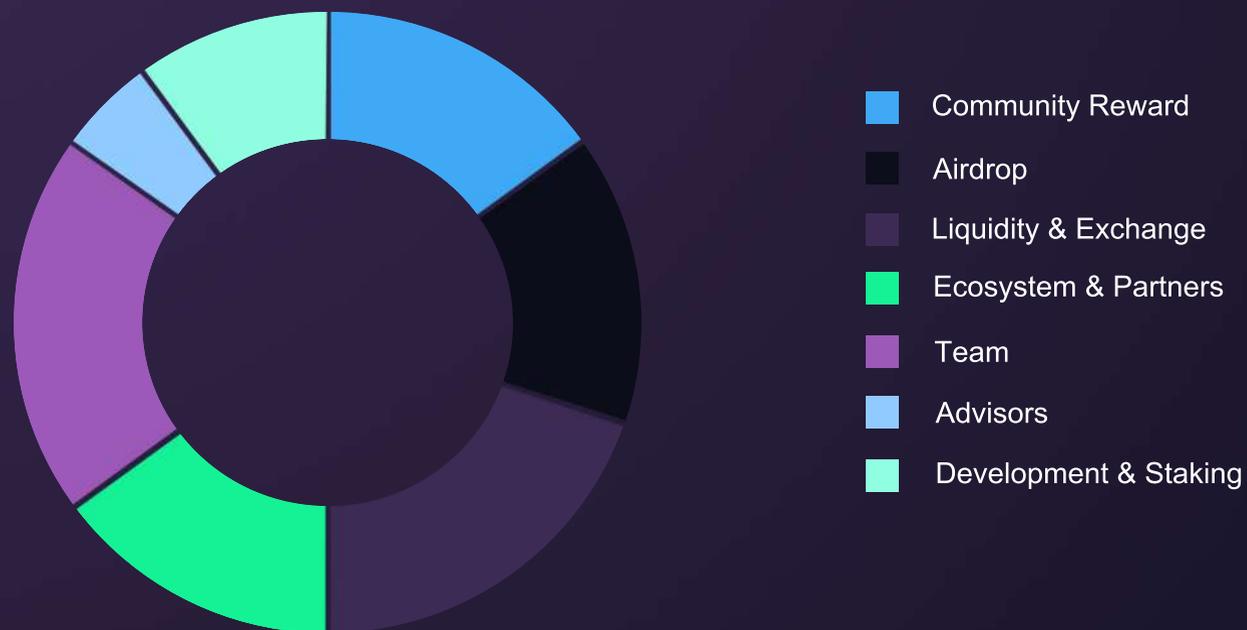

# Token Allocation & Vesting Strategy

A comprehensive breakdown of our tokenomics framework designed to ensure sustainable growth, long-term value creation, and balanced stakeholder alignment. This allocation strategy distributes 1 billion tokens across seven strategic categories, each with carefully structured vesting schedules to promote ecosystem stability and discourage short-term speculation.

# Total Supply Distribution Overview

Our token allocation model strategically distributes the total supply of 1,000,000,000 tokens across key stakeholder groups and functional categories. This balanced approach ensures adequate liquidity for market operations while reserving substantial allocations for community growth, team incentives, and long-term ecosystem development.

The largest allocations for Liquidity & Exchange and Team at 20% each reflect our commitment to both market stability and long-term team alignment. Combined community-focused allocations (Community Rewards, Airdrop, and Ecosystem) represent 45% of total supply, demonstrating our user-first philosophy.

# Strategic Allocation Breakdown

## Community Rewards 150M tokens (15%)

Gradual 12-month distribution for engagement, quests, and ecosystem activities

## Airdrop Campaign 150M tokens (15%)

Immediate unlock for marketing and attracting early adopters

## Liquidity & Exchange 200M tokens (20%)

Fully available at TGE for exchange listings and market liquidity

## Ecosystem & Partners 150M tokens (15%)

12-month gradual unlock for partnerships and collaborations

# Team & Advisor Incentives

## Core Team Allocation

200,000,000 tokens (20%)

The team allocation features a conservative vesting structure with a 12-month cliff period, ensuring no tokens are unlocked until month 12. Full vesting occurs at 24 months, creating strong long-term alignment between team success and project performance.

- 12-month cliff protects against early departures
- 24-month full vesting ensures sustained commitment
- Gradual unlock prevents market supply shocks

## Strategic Advisors

50,000,000 tokens (5%)

Advisor tokens recognize strategic guidance with a more accelerated schedule. A 6-month cliff ensures advisor commitment during critical early phases, with full vesting at 12 months to reward ongoing strategic contributions.

- 6-month cliff validates early engagement
- 12-month full vesting for strategic guidance
- Smaller allocation reflects advisory role scope

# Development & Staking Rewards

## Total Allocation

100,000,000 tokens representing 10% of total supply dedicated to product development funding and network staking incentives

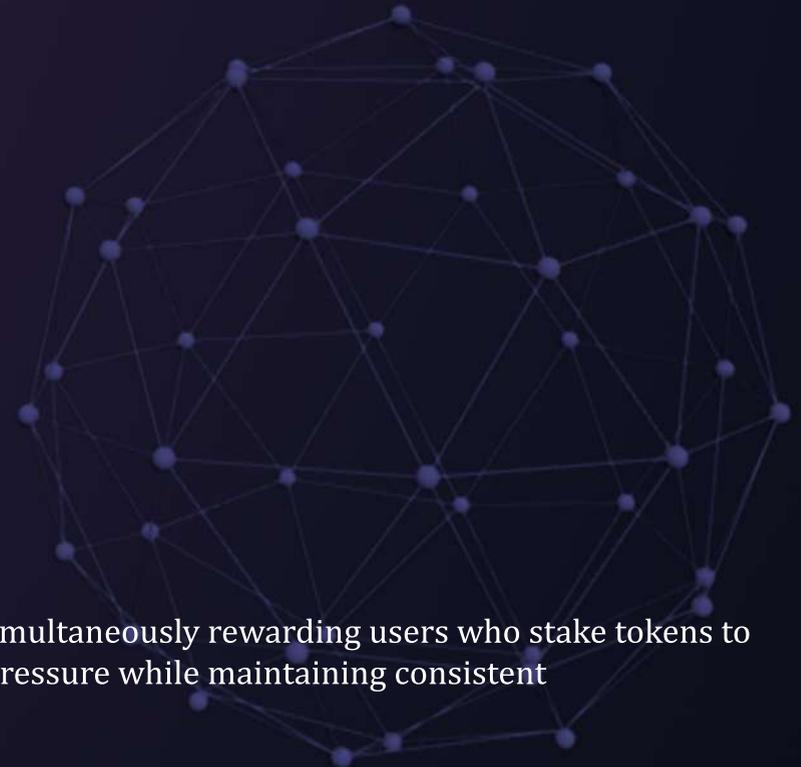

## Gradual Distribution

12-month unlock schedule ensures sustainable funding for continuous product improvements and consistent staking rewards for network participants

## Dual Purpose

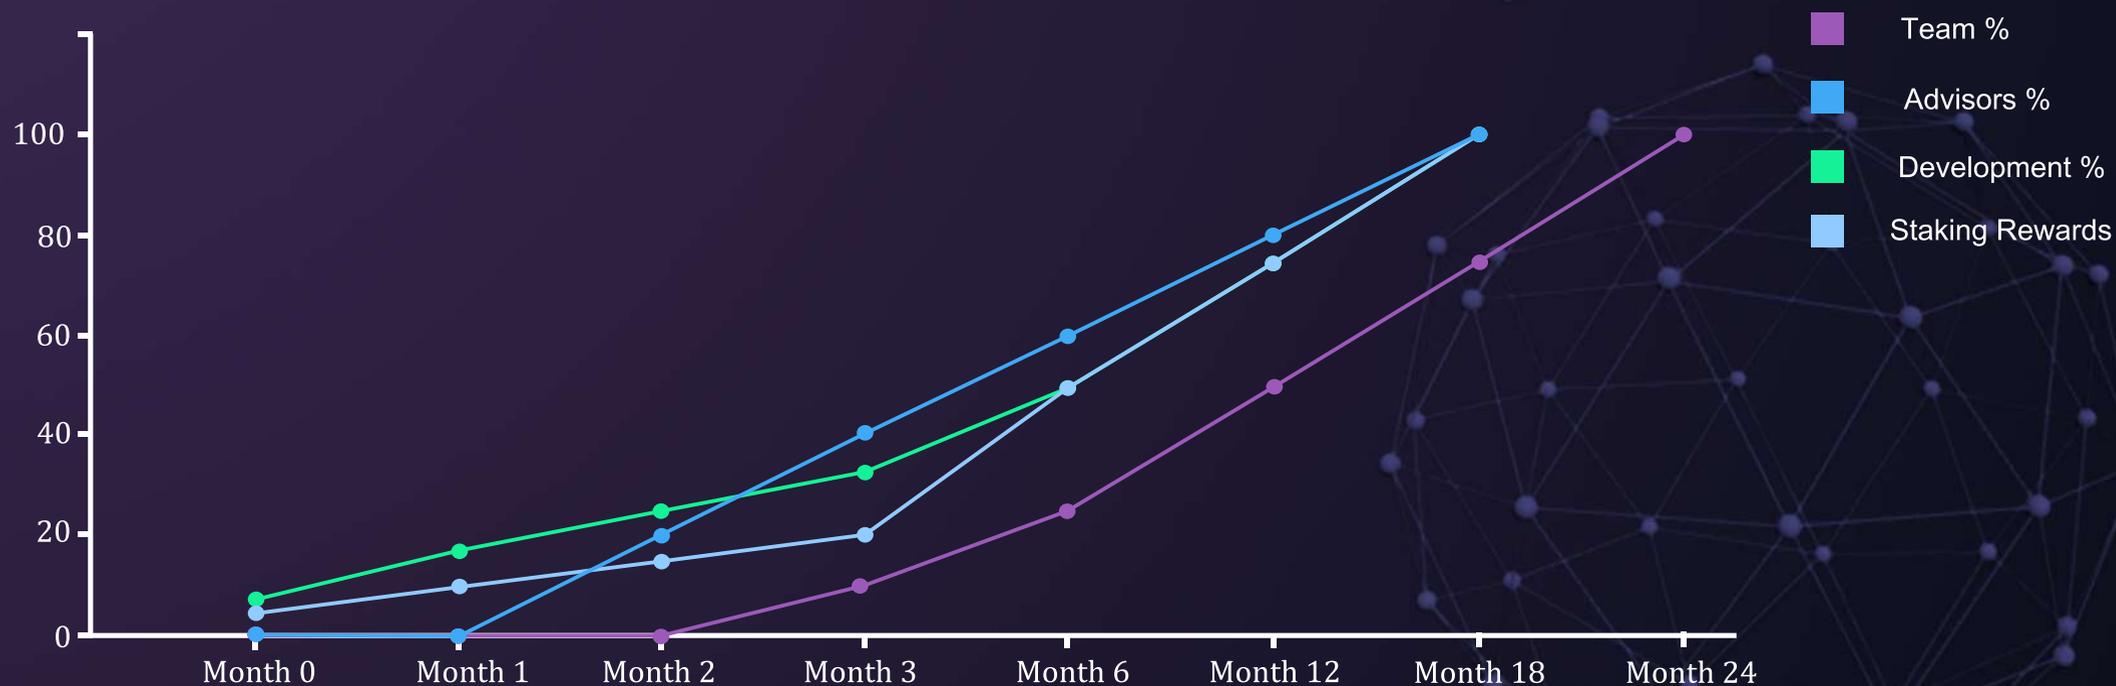

Balances technical innovation funding with user incentives, supporting both infrastructure development and active network participation

This allocation serves a critical dual function: funding ongoing technical development while simultaneously rewarding users who stake tokens to support network security and governance. The gradual unlock prevents concentrated selling pressure while maintaining consistent development resources and staking yield rates throughout the first year

# Comprehensive Vesting Timeline

Our vesting schedule creates a predictable token unlock pattern that protects market stability while ensuring adequate liquidity for all stakeholders. The timeline below illustrates the progressive unlock percentages across 24 months for team, advisors, development, and staking rewards categories.

The staggered vesting approach ensures continuous liquidity entry while preventing sudden supply shocks that could destabilize token price.

# Vesting Schedule Deep Dive

## Month 0 (TGE)

Liquidity & Exchange fully unlocked (200M).  
Airdrop campaigns begin. Development starts  
at 8%, Staking at 5%.

1

2

## Month 6 Milestone

Advisor cliff complete at 60%. Team reaches  
25%. Development hits 50% mark. Critical  
growth phase fully funded.

3

4

## Months 18-24

Team progresses from 75% to 100% vesting.  
All categories reach full unlock, completing the  
vesting schedule.

5

## Months 1-3

Team reaches 10% unlock. Advisors accelerate  
to 40%. Community rewards and ecosystem  
partnerships distribute gradually.

## Month 12 Maturity

Team 12-month cliff complete at 50%.  
Advisors fully vested at 100%. All 12-month  
gradual categories complete distribution.

# Community-First Allocation Model

450M

Community-Focused  
Tokens

Combined allocation for rewards,  
airdrops, and ecosystem  
partnerships

45%

User-Centric Supply

Nearly half of total supply dedicated  
to community growth and  
engagement

12

Distribution Period

Months of gradual distribution for  
sustainable ecosystem  
development

Our allocation philosophy prioritizes community ownership and long-term ecosystem health. By dedicating 45% of total supply to community rewards, airdrops, and ecosystem partnerships, we ensure that value accrues to active participants rather than being concentrated among insiders. The gradual 12-month distribution schedule for most community allocations prevents dilution while maintaining consistent incentives for user acquisition, retention, and ecosystem contribution. This approach builds a loyal, engaged community that becomes the foundation for sustained project success

# Anti-Speculation Design Principles

## Cliff Periods

12-month team cliff and 6-month advisor cliff prevent early exits and ensure committed participation during critical development phases

## Gradual Unlocks

Progressive vesting schedules avoid sudden supply increases that create selling pressure and price volatility

## Balanced Liquidity

20% TGE liquidity provides market functionality without excessive initial circulating supply

## Protects Token Value

Controlled supply release maintains price stability

## Encourages Long-Term Holding

Vesting aligns stakeholder incentives with project success

## Supports Ecosystem Growth

Predictable distribution enables strategic planning

# Tokenomics Summary & Key Takeaways

1

## Balanced Distribution

1 billion tokens allocated across seven strategic categories with no single group holding excessive control

2

## Community Majority

45% of supply dedicated to community, ensuring decentralized ownership and aligned incentives

3

## Strategic Vesting

Cliff periods and gradual unlocks protect against speculation while rewarding long-term commitment

4

## Market Stability

Predictable supply schedule enables healthy price discovery and sustainable liquidity management

This tokenomics framework represents a mature, well-considered approach to token distribution that balances the needs of all stakeholders. By prioritizing community ownership, implementing robust vesting schedules, and ensuring adequate liquidity, we've created a foundation for long-term ecosystem sustainability and value creation. The anti-speculation design encourages genuine participation over short-term trading, while the balanced allocation prevents centralization risks that plague many token projects
